WONDERGLASS

This sculptural light captures the fluid energy of circular movement, as if tracing the arcs of an choreography. Curved glass leaves revolve gently around a central illuminated column, their motion allowing light to glide across textured surfaces and shift through varying tones of translucency. The result is a luminous composition that feels both rhythmic and meditative, balancing stillness with perpetual motion in a celebration of harmony and shared momentum.

Limited edition of 3 units per shape per colour + 2 prototypes per colour + 2 artist's proofs per colour.
